

## Banner Installation Instructions

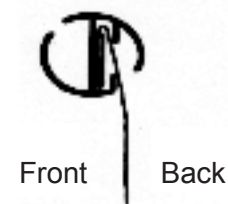

**Note:** When you receive your new BannerBug banner stand you will find an allen key inserted into one of the end plates of the metal stand. **DO NOT REMOVE THIS KEY BEFORE INSTALLING YOUR BANNER.**

1. A strip of double sided tape or thin velcro is attached to the PVC tongue in the unit. Attach the banner to the PVC tongue using the double sided tape or thin velcro.

2. A grey PVC strip with double sided tape or thin velcro is supplied with the banner stand. Remove the backing from this tape/velcro and apply it to the face of the graphic panel. Fold down twice.

3. Slide the folded top into the rail so that the graphic protrudes from the back of the rail. Insert the plastic plugs provided into the ends of the rail.

4. While carefully holding the graphic, remove the pin from the side. Gently allow the graphic to roll back into the unit.

**Note:** When changing the graphic panel, pull the graphic panel out completely to expose the graphic/PVC joint and line up the holes in the roller and end plate. Insert the pin, peel off the old banner and attach the new banner with double-sided tape or thin velcro. □
